Clients can search through 100s of transcripts online quickly

Save your clients the time & hassle of downloading multiple files to find the one file with the content they need

Create searchable files in RB Connect so your clients can easily find the right transcript, exhibit, or other file

With RB Connect's Full-Text Search plug-in, your clients can search through 100s of transcripts, exhibits, invoices, etc., in seconds online. Clients can search for text in different types of files in their online repositories, and they can also search in Transcript Packages, the transcript format designed to work in browsers and on mobile devices that bundles transcripts with their exhibits and other related files.

Full-text search for online files plug-in

With this optional plug-in to RB9 and RB Connect, you build indexes of clients' files in the RB9 repository so your clients search an index, not the actual files, online in their RB Connect repository. This saves them a significant amount of time over non-indexed searches, in which they would have to download files to search.

You choose which files in a client's repository to index. You can choose any files you store in the RB9 repository, no matter what type. You can index most text-based files, with the exception of some proprietary file formats.

Using Full-Text Search is even easier with Transcript Packages — there is no building indexes necessary — all Transcript Packages are automatically indexed.

RB Connect's Full-Text Search plug-in reads these file formats:

- PDF (text portion)
- *MS Word*
- *Excel*
- *PowerPoint*

- RTF
- HTML
- all text types, including ASCII
- RB Transcript Packages

(eTranscript PTX is not text based, so it is not supported.)

Optional plug-in for

b9

Reporterbase
Business Management Systems

Plug-in for fast text searches in RB Connect Repositories & Transcript Packages

How it works on your clients' side:

Your clients can search for content in **indexed files** in their Repository three ways:

• All of the words
• Any of the words
• The exact phrase

Your client enters text they want to find. They can search based on as few as three characters, with a minimum of two characters in each word to be searched.

Full-Text Search plug-in:

Requires RB9 and RB Connect. Also works in RB Connect Mobile.

Available for $50/month per 10GB of repository storage space for indexes, cancel anytime.

Their search results are displayed with file information first, such as the job number and date, and the file name. Then an excerpt within each file where the text was found is listed. Text that matches the search criteria is highlighted.

When your client locates the right file, they can view/download it.

In **Transcript Packages,** your clients have the same search options, but search returns a list of files that include the desired text. When your client clicks a hyperlinked file name, the Transcript Package appears with the first instance of the searched-for text selected and highlighted. Further instances of the text in the transcript are highlighted and the total number of instances appear at the top

with buttons to navigate through all the instances.

If you have the RB Connect Mobile plugin, then your clients can search for text on their smart phones and tablets in a layout optimized for mobile devices.

On your side

You create Full-Text Indexes of any files in your repository which are automatically uploaded to your repository.

We do not recommend indexing all files because the monthly charge for the Full-Text Search plug-in is based on the storage space used by the indexes. You can also use the same function to delete old indexes to save on storage space.

Subscribe to RB9, RB Connect, RB Connect Mobile, & Repository Full-Text Search

RB9 products are available by subscription only. Add or cancel user licenses and plug-ins as needed, and cancel the whole system at any time without further obligation.

RB9 products are backed by an unconditional, 30-day, money-back guarantee, so you can try them risk-free.

For more information about subscribing to RB9, RB Connect, RB Connect Mobile, and Repository Full-Text Search, visit our website.
